

Saman Shakil Khan

Software Engineer/Developer

Dubai, UAE • +971 506019290 • samankhanhq@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with 2+ years of experience building production web platforms for mobility operations, subscriptions, analytics, and customer-facing experiences. Primary frontend owner across large React/TypeScript admin systems and currently building Udrive's new Next.js website from Figma. Experienced in responsive UI architecture, data-heavy dashboards, D3/Mapbox visualizations, performance optimization, AWS deployment, and API integration, with additional production backend experience in Python/Kafka-based KYC automation. Delivered ~70% infrastructure cost reduction through analytics migration and improved debt recovery by 30% through invoice automation.

EXPERIENCE

Udrive – Rent-a-Car | Dubai, UAE | Software Engineer/Developer | Aug 2024 – Present

Internal Operations & Analytics

- **Primary frontend owner for a React + MUI internal operations platform spanning customers, verifications, reservations, invoices, vehicles, damage reports, credits, fines, claims, analytics, mobility operations, and admin tooling.**
- Built or heavily evolved six analytics areas — Trip Revenue, Cleaning, RTA Parking, Customer Stats, Metrics (D3), and TARS — with shared filters, responsive tables/charts, and CSV export workflows.
- **Built mobility operations modules for a near-real-time Mapbox driver map (10-second polling), rides operations, driver management, and fleet management, including create/edit/assignment workflows and reusable UI patterns.**
- Implemented vehicle operations including lock/unlock, immobilize/mobilize, onboarding/offboarding, location/state updates, and resilient loading, error, and toast feedback patterns.
- Built an in-app Banner Studio with draggable/resizable layers, text/images/shapes, templates, undo/redo, preview, and HTML/JSON export/import for lightweight marketing content creation.
- Maintained protected routing, JWT-based frontend auth flows, feature scopes/RBAC UI, release notes, and responsive layouts across desktop, tablet, and mobile.

Subscription, CRM & Fleet Operations

- Built most of the React frontend for the monthly subscription admin platform, covering the sales pipeline, customers/KYC, fleet operations, subscriptions, invoices, product catalog, analytics, and role-based administration.
- Built the Lead → Initial Contact → Qualified → Won/Lost deals workflow with Kanban pipeline, stage transitions, filters/search, assignee management, lost/archive actions, lead creation, and one-click personalized WhatsApp outreach.
- Developed customer and fleet consoles with verification queues, payment/device/history views, account actions, MapLibre maps, hardware controls, reservations, damage reports, and vehicle state management.
- Implemented subscription car assignment, invoice operations, product management for colors/pricing/mileage packages, and D3 lead/funnel analytics; also created a filterable, print-friendly Deals Report.
- Migrated the frontend from CRA/CRACO to Vite for faster startup/HMR and simpler configuration while preserving the existing build output; handled frontend build/deployment on AWS EC2 with Nginx and HTTPS.

Customer-Facing Web Development

- **Building a new customer-facing website from scratch from Figma using Next.js App Router, TypeScript, and CSS Modules, translating designs into pixel-accurate responsive experiences across desktop, tablet, and mobile.**
- **Implemented roughly 20 routes spanning home, rental offerings, fleet, mobility services, business, help content, articles, contact, careers, and legal content, with English/Arabic locale routing and RTL support.**
- Created reusable navigation, footer, hero, CTA, FAQ, pricing/rental, gallery, and content components to keep the design system consistent and maintainable across pages.
- Optimized page delivery with AWS CloudFront-hosted WebP/SVG/Lottie assets, next/image responsive loading, lazy loading, next/font, critical asset preloading, and offscreen/play-once Lottie behavior.

KYC & Verification Automation

- Contributed to a production Python/FastStream Kafka verification pipeline that orchestrates Taareef AI OCR, face/liveness/audio checks, AWS S3 documents, Postgres updates, and automated approval/rejection workflows.
- Implemented/maintained validation and decisioning around Emirates ID, UAE/foreign driving licences, and passports, including age/expiry/driving-experience eligibility, cross-document name matching, face/liveness checks, and fraud signals.

Platform Automation & Observability

- Delivered invoice automation using serverless functions, improving debt recovery by 30% while reducing manual operational overhead.

- Migrated analytics to self-hosted Apache Superset with secure data pipelines/authentication, reducing infrastructure costs by ~70%; contributed to Kafka-based monitoring and operational visibility.

Arata International FZC (Bahwan International Group) | Dubai, UAE | IT Intern | Feb 2024 – Jun 2024

- Built and shipped a cross-platform React Native (Expo) app for buying and selling used vehicles, with relational data models for profiles, listings, and bidding transactions.
- Developed and maintained REST APIs using .NET; supported CARPRO rental/leasing data operations and INTELLiVIEW BI dashboards/data-quality workflows.

Recognition: Certificate of Appreciation for successful completion of the Engineering & Technology Services Division internship.

Dubai Technologies | Dubai, UAE | Software Intern | Jul 2023 – Aug 2023

- Developed responsive desktop GUIs using Python (Tkinter, PyQt) and collaborated with cross-functional teams to translate requirements into deployable software solutions.

TECHNICAL SKILLS

Frontend: Next.js, React.js, TypeScript/JavaScript, MUI, CSS Modules, Redux, React Router, D3.js, Mapbox/MapLibre, Lottie, React Native (Expo)

Backend & Integration: Python, FastStream, Node.js/Express, .NET, REST APIs, Kafka consumers, Pydantic, asyncpg, JWT/OAuth2

Cloud & DevOps: AWS EC2, S3, CloudFront, Route 53, CloudWatch, Nginx, Cloudflare, GitHub Actions, Vite, CRACO

Data & Monitoring: Apache Kafka, Apache Airflow, Apache Superset, PostgreSQL, MS SQL Server, Firebase

Tools: Git/GitHub, Jira, Confluence, Figma implementation, Adobe Photoshop/Illustrator, Premiere Pro

EDUCATION

B.Tech in Computer Science Engineering – Manipal Academy of Higher Education, Dubai | Graduated 2024

Higher Secondary (CBSE, PCM) – IES, Sharjah, UAE | 2018 – 2020

PROFESSIONAL DEVELOPMENT

Mathematics for Machine Learning — Imperial College London, Coursera (2021) • Object-Oriented Programming in Java — UC San Diego, Coursera (2021) • Introduction to Networks & IoT Fundamentals — Cisco Networking Academy (2023) • Blockchain Foundation & Ethereum Fundamentals — Kerala Blockchain Academy (2023)

VOLUNTEER EXPERIENCE

Sponsorship Head, Technovanza MAHE Dubai – School of Engineering & IT (2023) • Volunteer, AJAR Ramadan Drive – Manipal Academy of Higher Education, Dubai (2022)
